	abstract	We investigate the properties of a class of weighted vector-valued L_p-spaces and the corresponding (an)isotropic Sobolev-Slobodetskii spaces. These spaces arise naturally in the context of maximal L_p-regularity for parabolic initial-boundary value problems. Our main tools are operators with a bounded $\calH^\infty$-calculus, interpolation theory, and operator sums.	**abstract**	We investigate the properties of a class of weighted vector-valued L p -spaces and the corresponding (an)isotropic Sobolev-Slobodetskii spaces. These spaces arise naturally in the context of maximal L pregularity for parabolic initial-boundary value problems. Our main tools are operators with a bounded H â^žcalculus, interpolation theory, and operator sums.
