	abstract	We show that every vector lattice homomorphism T between Sobolev spaces can be represented by a composition and a multiplication, that is, T is of the form $Tu(x)=u(h(x))g(x)$ for quasi every/almost every x and all u.	**abstract**	We show that every vector lattice homomorphism T between Sobolev spaces can be represented by a composition and a multiplication, that is, T is of the form Tu(x)=u(h(x))g(x) for quasi every/almost every x and all u.
