	abstract	For every $ 1 < p < \infty $ an isomorphically polyhedral Banach space E_p is constructed having an unconditional basis and admitting a quotient isomorphic to ℓ_p. It is also shown that E_p is not isomorphic to a subspace of a $C(K)$ space for every countable and compact metric space K.	**abstract**	For every Banach space Z with a shrinking unconditional basis satisfying upper p-estimates for some $p > 1$, an isomorphically polyhedral Banach space is constructed having an unconditional basis and admitting a quotient isomorphic to Z.
